Professional Summary

Computer Science undergraduate focused on building AI-integrated products from concept to deployment. Experienced in designing backend systems, integrating LLM-based features, and crafting user-centered intelligent applications. Interested in developing scalable AI-driven systems that bridge research and real-world usability.

Projects

SkillScope AI - Resume Intelligence Platform

- Built AI-powered resume intelligence system using Python for structured parsing and skill-gap analysis
- Designed modular backend architecture to support extensible recommendation pipelines
- Integrated LLM-based prompt workflows to generate personalized learning roadmaps
- Implemented structured validation logic for scalable feature expansion

ScamShield - LinkedIn Safety Concept

- Designed rule-based profile risk detection logic using structured behavioral indicators
- Modeled system workflow for safety scoring and threat-level categorization
- Conducted usability validation for real-world social media threat scenarios

MediSpeak - AI Health Assistant (Ideathon Winner)

- Designed AI-assisted prescription interpretation interface to improve medical clarity
- Implemented structured input-processing pipeline for contextual response generation
- Developed responsive UI using HTML, CSS, Tailwind CSS

Experiences

UI/UX Intern, Cognifyz Technologies

- Designed structured user flows and system layouts for mobile interfaces
- Collaborated with development team to translate design specifications into functional components
- Applied usability principles to improve interaction consistency and reduce interface ambiguity.
- Improved interface consistency by standardizing design components across screens

GSSOC'25 Contributor

- Contributed to an open-source web project by improving code structure and implementing feature enhancements
- Collaborated using Git-based workflows including pull requests, issues, and code reviews

Technical Skills

Languages: Python, C, Java

Core Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

AI & Systems: LLM prompt engineering, system workflow design, feature architecture

Frontend: HTML, CSS, Tailwind CSS

Database: MySQL

Tools & Platforms: Git, GitHub, Postman

Data & Analytics: Tableau, Power BI

Education

CMR Institute of Technology, Hyderabad

2024 - 2028

B.Tech in Computer Science and Engineering

- CGPA: 8.85
